Your score has been released for Assignment on Securing Software for CS50 Cybersecurity.

You may check your overall progress in the course by visiting cs50.me/cybersecurity, logging in with your GitHub account (if you haven't already done so, you'll need to join the course) whose username you've previously provided. Please note that scores in this course are only finalized when you receive an email from the CS50 Bot (like this one), so even if you see score updates in the meantime, they are not official until they have been released.

It may take up to six hours for all scores to register on cs50.me/cybersecurity after they are released. Your patience is appreciated.

A score of 70% or better is required to pass an assignment. An assignment will appear green in the gradebook if you have passed. Below your score in this email is a link (some browsers render it invisible) where you can click to see any feedback that may have been left for you by the grading staff. For some additional (general) feedback on 1-point questions specifically, visit cs50.harvard.edu/cybersecurity/2023/onepoint.

Assignment on Securing Software for CS50 Cybersecurity

9 / 10
